

Wysetek successfully implemented AWS S3 and Veeam for Service Provider

Company Overview –

The customer is founded by qualified and experienced professionals having a collective industry experience of more than 50 years serving customers from diversified industries like it / ites / bfsi / manufacturing / services for more than 15 years. Backed up by experience of working and partnering with global leaders in it and facilities solutions, they bring in wealth of knowledge into consulting, design and management of complex infrastructure requirements. Their aim is to bring in unique and innovative technologies to enable facilities managers & IT managers to manage their infrastructure more efficiently and help their organizations manage and control spiraling capex and opex.

Business Requirement

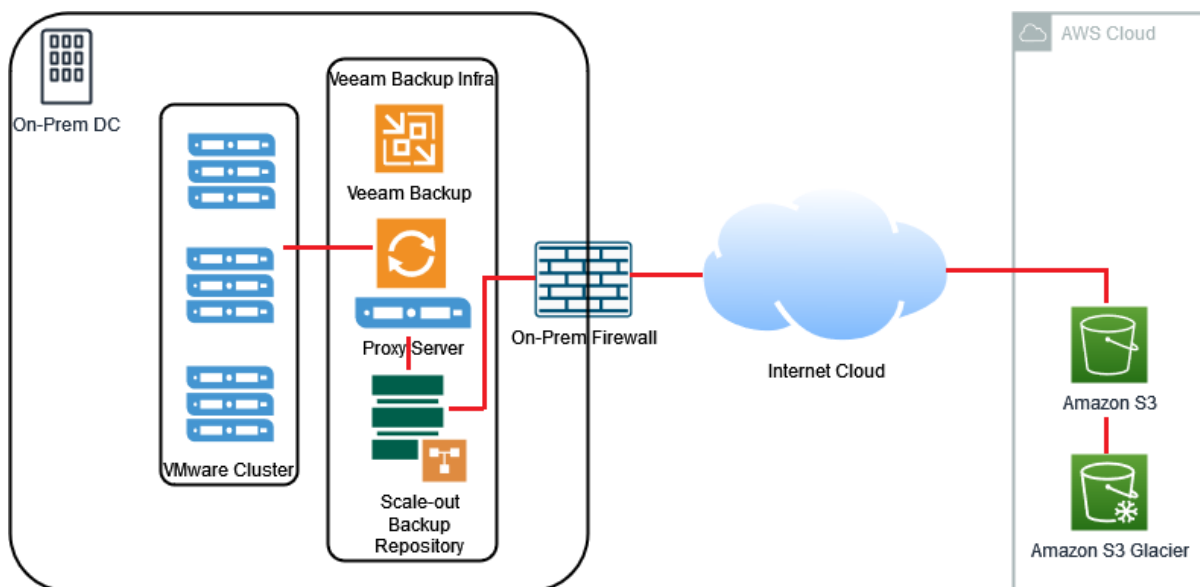

- Data Recovery : The customer is Looking for Data Recovery Solution
- Security : Data must be securely stored out of Primary Datacenter
- Management and Cost : Lower acquisition cost and Ease of management.

Challenges:

- Higher cost of Physical Hardware at Secondary Site.
- Setup and Management of Datacenter infrastructure at the Secondary site.
- Disaster at the Primary site leads to loss of production and backup data.

Solution:

- ✓ AWS S3 as a backup storage.
- ✓ Multiple Restoration points through Veeam Backup and Replication.
- ✓ Data Recovery on Demand leading to lower cost of acquisition.

Note: Red line showing backup flow and restoration flow for Data Recovery.

Benefits:

Utilizing a cloud storage for long-term backup retention helped the customer to achieve Business requirements while overcoming challenges.

- ✓ Veeam Disaster Recovery is on-demand DR solution which has lower TCO
- ✓ Veeam native encryption mechanism used for securing backed up data.
- ✓ AWS S3 used for storing backed up data.

Success: - The Customer is now able to set up and Comply with Data Recovery. The Customer can check and Test DR Drill while maintaining lower TCO with On-demand EC2 instances.
